YOUR FREE

AI COMMAND CENTER

BUILD GUIDE

BUILD YOUR OWN AI COMMAND CENTER IN 1 DAY

FREE

Your complete blueprint to install Claude, build an Obsidian second brain, and run an AI command center on your computer.

COREY GRAY

LAUNCH AUTOMATION

START HERE

1	2	3
OBSIDIAN VAULT	CLAUDE COWORK	OPTIONAL DASHBOARDS

Hi, I'm Corey

I run Launch Automation, a done-for-you agency based in Boca Raton. I specialize in helping insurance agents scale and automate their sales and marketing. I also help business owners across other industries adopt AI and actually implement it in a way that makes them money.

AI is my passion. I run a successful agency, but I spend my best hours building, testing, breaking, and rebuilding AI systems. The same systems I run my own business on are the ones I help my clients build.

Find me here: **https://launchautomation.ai/link**

What This Guide Helps You Build

A personal AI command center on your computer. Not theory. Not another course. A working system that connects your files, your business context, and your AI workflow so you can actually use AI every day.

- **Your second brain:** An Obsidian vault that stores your notes, clients, tasks, templates, and operating context.
- **Your AI brain:** Claude Desktop with Cowork mode reading and writing to your vault.
- **Your cockpit:** Optional dashboards, voice, and visual command-center layers when you are ready.

WHY A COMMAND CENTER

One Cockpit For Your Business

Because it is the most fun, useful project you can take on as a business owner. It puts everything you need on one screen: your clients, your calendar, your inbox, your tasks, your pipeline, and your AI agents.

Voice-driven if you want it. Iron Man feel without the budget.

The Bigger Picture

Building one of these is the fastest way to actually adopt AI. Not theory, not YouTube videos, not another course. Real implementation that makes you money this month.

Technology is a friend or an enemy. You pick. AI is not coming. It is already here. The gap between people using it and people watching it widens every quarter. The businesses adopting now are compounding. The ones waiting are getting passed.

Whatever you build with this guide, the act of building it puts you on the right side of that gap. You will learn more in one weekend with this blueprint than most operators learn all year.

Command Center Visual

IF YOU WANT HELP

I'm Cheap Compared To Most

This guide is complete. You can build the whole thing yourself with no outside help. If you do, I want to hear about it. Tag me on TikTok or Instagram when you finish.

If you want me in the room while you build, I do live one-on-one Zoom sessions. I remote into your computer and we build it together while I teach you what we are doing. No retainer. No setup fee. No monthly commitment.

- **Simple pricing:** $200 per 1-hour session.
- **No package trap:** No retainer. No setup fees. No package you have to buy.
- **Pay as you go:** Book what you need.
- **Recorded sessions:** Every session is recorded. You keep the recording.
- **Fast progress:** I usually save people days or weeks of trial and error in one hour.

TIP: If you have never used Claude or Obsidian before, one session with me will save you at least a week of fumbling. That math always wins.

Two Ways To Work With Me

- **Done-WITH-you AI coaching:** Live sessions where I remote in, build with you, and teach as we go. Best if you want to learn and own the build.
- **Done-FOR-you Command Center:** I build the whole thing for you, install it on your computer, and train you to use it. Best if you want it done and you do not want to touch the keyboard.

HOW TO USE THIS GUIDE

Do This In Order

Everything you need is in this document plus the Google Drive folder linked below. Do not skip steps. Do not skim. The build is simple if you go in order.

- **Step 1:** Read the steps top to bottom.
- **Step 2:** Open the Drive folder in a separate tab.
- **Step 3:** Do one step at a time. Check that it works before moving on.
- **Step 4:** If you get stuck for more than 15 minutes, screenshot the error, comment it on this TikTok video: https://www.tiktok.com/@launch.automation/video/7650096612538191135?lang=en, and I will answer it publicly.

TIP: Block one Saturday morning for the foundation steps. Three hours, coffee, no distractions. You can be running Claude with your vault by lunch.

What Is In The Drive Folder

- **Starter vault files:** A folder called Install for client that you drop into your Vault folder.
- **CLAUDE.md:** The operating instructions template.
- **Template files:** Client profile, conversations, tasks, meeting notes, and more.
- **System folder files:** CONTEXT, TOOLS, USER, IDENTITY, and related system files.
- **Deep-dive docs:** The 11 phase documents in case you want the architecture-level detail.

Google Drive folder

Open this in a separate tab before you start.

ONE SMALL ASK

This Guide Is Free

I am not making money on it. I built it because I want more people running their own AI systems instead of watching everyone else do it.

If this saved you a week of fumbling, I would love your help growing my channels. If you follow me, like a few posts, comment on something, and share one video, I will keep dropping free resources like this one. That is the deal.

Where To Find Me

- **Instagram:** @launch.automation
- **TikTok:** @launch.automation
- **YouTube:** @launch-automation-ai

The Five-Step Ask

- **Follow:** Follow me on at least one platform.
- **Like:** Like a few of my recent posts so the algorithm notices.
- **Comment:** Ask a question or tell me what you are building.
- **Share:** Share one of my videos with someone who would use this.
- **Tag me:** When you finish your build, tag me. I love seeing the results.

Keep It Going

Five minutes of your time helps me keep building free tools you can use. Read the guide, use it, and watch the magic happen.

THE BUILD GUIDE

The Path From Zero To Running System

You are going to build a personal AI command center on your computer. Here is the full path from zero to running system.

The Big Picture: Three Layers

- **Layer 1:** Obsidian vault on your Mac. A folder of plain text files. Your second brain.
- **Layer 2:** Claude Desktop with Cowork mode. The AI brain that reads and writes to your vault.
- **Layer 3:** Optional dashboards such as AI Ops, Agency Ops, and the Bridge with voice. The Iron Man cockpit.

Where To Start

Start with Layer 1 and Layer 2. Many people stop there and get tons of value. Layer 3 is for the Iron Man feel.

What You Need Before Starting

- **Computer:** A Mac, or Windows. Most steps work the same.
- **Claude account:** A Claude account on the Max plan. Cowork requires Max. Roughly $100 to $200 per month.
- **Microphone:** Built-in is fine if you want voice.
- **Everything else:** The rest is free or included.

TIP: Do not buy ElevenLabs or Anthropic API credits yet. You do not need them until Step 10 or later.

FOUNDATION STEPS

Step 1: Install Claude Desktop

TIME: 5 MINUTES

- **Go to:** https://claude.com/download
- **Download:** Click Download for Mac.
- **Install:** Open the downloaded file and drag Claude to your Applications folder.
- **Sign in:** Launch Claude and sign in with your account.
- **Confirm plan:** Click your avatar > Billing. Confirm you are on Max or higher. If not, upgrade.

TIP: Cowork mode is what makes this whole thing work. It requires Max. Pro is not enough.

Step 2: Install Obsidian

TIME: 5 MINUTES

- **Go to:** https://obsidian.md
- **Download:** Click Get Obsidian for Mac.
- **Install:** Open the downloaded file and drag Obsidian to Applications.
- **Open:** Launch Obsidian. Do not create a vault yet. Just confirm it opens.

Step 3: Create The Vault Folder

TIME: 2 MINUTES

- **Open Finder:** Click Documents in the sidebar.
- **Create folder:** Right-click in empty space and choose New Folder.
- **Name it:** Vault
- **Location:** The folder exists at /Users/<your-username>/Documents/Vault/

FOUNDATION STEPS

Step 4: Drop The Starter Files Into Your Vault

TIME: 5 MINUTES

- **Open Drive:** Open the Drive folder I sent you.
- **Find folder:** Find the folder called Install for client.
- **Download:** Download it and unzip if needed.
- **Select files:** Open the unzipped folder and press Cmd+A to select everything inside.
- **Move files:** Drag the selection into your Vault folder.

TIP: The CLAUDE.md file MUST be at the root of Vault, not inside a subfolder. Cowork looks for it there specifically.

CONNECT THE BRAIN

Step 5: Open Vault In Obsidian

TIME: 2 MINUTES

- **Open Obsidian:** Launch the Obsidian app.
- **Open folder:** Click Open folder as vault.
- **Choose Vault:** Navigate to /Users/<your-username>/Documents/Vault/
- **Confirm:** Click Open. You should see all the folders and files in the sidebar.

Step 6: Customize CLAUDE.md

TIME: 15 TO 30 MINUTES

- **Open CLAUDE.md:** In Obsidian, click CLAUDE.md.
- **Find Business Context:** Scroll to the bottom and find the Business Context section with bracketed placeholders like [YOUR NAME] and [YOUR BUSINESS].
- **Fill it in:** Fill in every bracketed section with your real information.
- **Be specific:** The better Claude knows you, the smarter it acts on day one.
- **Save:** Press Cmd+S.

TIP: Spend extra time on the Things you hate seeing in AI writing section. That alone makes Claude sound 10x better right out of the box.

SKILLS AND CONNECTORS

Step 7: Connect Vault To Claude

TIME: 5 MINUTES

- **Enable Cowork:** In Claude Desktop, find the Cowork toggle. Usually in Settings or the sidebar.
- **Add folder:** Click Add folder.
- **Choose Vault:** Navigate to your Vault folder. Single-click on Vault. Do not double-click. Click Open.
- **Allow access:** Click Allow on the macOS permission dialog.
- **Test:** Open a new chat and type: Read CLAUDE.md and summarize what you know about my business.

TIP: If Claude cannot see CLAUDE.md, the file is not at the vault root or has a typo in the filename. It must be exactly CLAUDE.md, all caps, no extension.

Step 8: Install Foundation Skills

TIME: 15 MINUTES

- **Document handling:** docx, xlsx, pptx, pdf
- **Foundation:** productivity, schedule, skill-creator, consolidate-memory
- **Builder tools:** mcp-builder, watch, web-asset-generator, deep-research, viral-video-production

TIP: Skip ZoomInfo and Sanity unless you actually use them.

SKILLS AND CONNECTORS

Step 9: Install Domain Skills

TIME: 10 MINUTES

- **operations:** Install if you run structured processes.
- **marketing:** Install if you market your business.
- **brand-voice:** Install if you produce content.
- **searchfit-seo:** Install if you have a website.
- **Update tools file:** Tell Claude to update System/TOOLS.md with the list and today's date.

Step 10: Connect Your Tools

TIME: 30 MINUTES

- **Gmail:** Your work account, not personal.
- **Google Calendar:** Connect your calendar.
- **Google Drive:** Connect your drive.
- **Meeting recorder:** Connect Fathom or Granola if you record meetings.
- **CRM:** Connect GoHighLevel, HubSpot, Salesforce, or whichever CRM you use.
- **Work tools:** Connect Slack, Notion, Asana, Linear, Canva, Stripe, or whatever you use.
- **Enterprise search:** After all connectors are in, install the enterprise-search plugin.

TIP: Test each connector with a real query before installing the next one. If something breaks, you will know which one.

USE IT DAILY

Step 11: Use It Daily For 30 Days

Most important step. Sounds obvious, but most people install this and never use it.

- **Morning briefing:** Run: Give me a morning briefing. Use this every morning.
- **Client prep:** Run: Show me [client name]. Use before any client call.
- **File cleanup:** Run: Compile Raw. Drop files in the Raw folder, then run this when you want them filed into your Wiki.
- **Keep using it:** Use it daily. Note what feels missing. That tells you what custom skill or workflow to build next.

TIP: Most people quit at Day 4 because the system feels empty. Push through. Week 2 is when it clicks.

Optional: The Visual Layer

Steps 1-11 give you the working brain. If you want the Iron Man dashboards too, that is the visual layer.

- **AI Ops dashboard:** Shows your AI inventory, plugins, skills, connectors, and token usage.
- **Agency Ops dashboard:** Shows your clients, pipeline, tasks, and deliverables.
- **The Bridge:** The master HTML console with voice control.
- **Cloudflare Pages:** Free hosting so your dashboards are at real URLs.
- **Voice assistant:** Your wake word and chosen voice via ElevenLabs.
- **Ambient voice capture daemon:** Records you all day and transcribes locally.

TIP: Do not build the visual layer until you have used Steps 1-11 for at least 30 days. You will know what panels you actually want by then.

Full design spec for builders

Look for Command-Center-Design-Spec.md in the Drive folder.

https://drive.google.com/drive/folders/1dr-UxLItg3CzF8nsVIfCR8h1IPTWKu_D?usp=sharing

LAST THING

You Have Everything You Need

The blueprint, the files, the steps, the design spec for the full system. The same setup I run my own business on. Free.

Here is the part most people do not want to hear: technology is a tool. Tools do not change anything until you pick them up and use them. The people who pick this up and run with it are going to be in a different place in six months than the people who downloaded this guide and never opened the Drive folder.

Adopt it now. Build something. Use it daily. Tell me what you build.

When You Get Stuck

- **Quick question:** Do not call or text me unless you are a paid client. Go to any of my posts and leave a comment. I will answer your question publicly.
- **Stuck for real:** Book a session. One hour usually unsticks a week of trial and error.
- **Want it built for you:** See the Command Center service link.
